

9. Create a table and Remove all the records from the table created

```
CREATE TABLE employees (  
  id INTEGER PRIMARY KEY,  
  first_name TEXT NOT NULL,  
  last_name TEXT NOT NULL,  
  department TEXT NOT NULL,  
  salary NUMERIC NOT NULL  
);
```

To remove all records from the employees table, We can use the DELETE FROM statement, like this:

DELETE FROM employees;

This will delete all rows from the employees table, but the table structure (columns, data types, constraints, etc.) will remain.
