

## How to Installing Windows in Virtual Machine/Workstation

To install Windows in a virtual machine, we need to use a virtualization software such as VMware Workstation, Oracle VirtualBox, or Microsoft Hyper-V. Here are the general steps to install Windows in a virtual machine using VMware Workstation:

1. Download and install VMware Workstation on our computer.
2. Launch VMware Workstation and click on "Create a New Virtual Machine."
3. Select the "Installer disc image file (iso)" option and browse to the location of our Windows installation ISO file. If We do not have an ISO file, we can download the Windows installation media from Microsoft's website.
4. Follow the prompts to specify the virtual machine's settings, such as the amount of RAM and virtual hard drive size.
5. Click "Finish" to create the virtual machine.
6. Double-click on the virtual machine in the VMware Workstation interface to start it.
7. Follow the prompts to install Windows on the virtual machine.

The steps to install Windows in a virtual machine using VirtualBox or Hyper-V will be similar, but the specific details may vary depending on the virtualization software We are using.
