9.Create SPA using Angular JS that show Syllabus content of MCA subject.

Here is an example of how We could create a single-page application (SPA) using AngularJS that shows the syllabus content of an MCA subject:

```
<div ng-app="myApp" ng-controller="syllabusController">
  <h1>MCA Syllabus</h1>
  <ul>
    <li ng-repeat="topic in syllabus">{{topic}}</li>
  </ul>
</div>

<script>
  angular.module('myApp', [])
    .controller('syllabusController', function($scope) {
      $scope.syllabus = [
        "Introduction to Computer Science",
        "Programming Fundamentals",
        "Data Structures and Algorithms",
        "Computer Networks",
        "Database Systems",
        "Software Engineering",
        "Operating Systems",
        "Data Science and Machine Learning"
      ];
    });
</script>
```

This code defines an AngularJS app and controller, and uses ng-repeat to iterate through the syllabus array and create a li element for each element in the array. The {{topic}} expression binds the value of the current element to the li element.

The resulting output would be:

```
MCA Syllabus

- Introduction to Computer Science

- Programming Fundamentals

- Data Structures and Algorithms

- Computer Networks

- Database Systems

- Software Engineering

- Operating Systems

- Data Science and Machine Learning
```
